

We want to be part of a world in balance

We want to develop products with eco-respect responsible supply chains and circular life. Join us and drive the progress towards a sustainable and circular future and become part of a world in balance.

We promise to:

- Respect ecological limits natural resources and climate change
- Work on the basis of the UN's Global Goals Agenda 2030 for a better world
- Promote circular solutions and choices from idea to reuse for a sustainable future
- Support responsible suppliers and sustainable competition on a level playing field
- Switch to more climate friendly alternatives e.g. to renewable and recycled materials
- Our products and manufacturing are carried out in accordance with our Code of Conduct and meet environmental quality and social responsibility requirements
- Choose materials that contribute to a good non-toxic working environment and that our recycling products will directly encourage end-users to recycle more.

For our corporate culture we promise to:

- Promote development creativity openness and innovation
- Create a great workplace that is safe and secure with equality and diversity in accordance with our employee policy
- Continuously train all employees in sustainability to raise our internal level of competence and awareness
- Create new conditions and opportunities for sustainable development and circularity
- Create continuous improvement by consistently measuring identifying and analysing the outcomes of what we do
- Only work with credible suppliers who work according to the Code of Conduct and share our vision of a sustainable world
- Meet and exceed binding and legal requirements.

For our customer relationships we promise:

- To offer maximum resources and expertise for the best results
- A reliable service from the first call to the finished solution and throughout the life of the product
- That our sales include the sustainable aspects of the environment, quality and social responsibility
- To provide product training and expertise in storage and sorting solutions.
